An investor should consider the investment objectives, risks, and charges and expenses of the fund carefully before investing. A prospectus and a summary prospectus which contains this and other information about the fund may be obtained by visiting praxisinvests.com/prospectus. The prospectus and the summary prospectus should be read carefully before investing.

Investing involves risk. Principal loss is possible.

ETFs are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of an ETF's shares may trade at a premium or discount to its net asset value, an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact an ETF's ability to sell its shares. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. Brokerage commissions will reduce returns.

Investment Style Risk. The Fund is also subject to investment style risk, which is the chance that returns from large cap growth stocks will trail returns from other asset classes or the overall stock market. Growth stocks tend to go through cycles of doing better — or worse — than the stock market in general.

Index Investing Risk. Because the Fund is designed to track the performance of an index, securities may be purchased, retained or sold at times when a more actively managed fund would not do so. If the value of securities that are heavily weighted in the index change, you can expect a greater risk of loss than if the Fund had a lower weighting to those securities.

Industry Concentration Risk. In following its methodology, the underlying index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or group of industries. To the extent that the index concentrates in the securities of issuers in a particular industry or group of industries, the Fund also may concentrate its investments to approximately the same extent.

Non-Diversification Risk. The Fund is non-diversified, meaning that it is permitted to invest a larger percentage of its assets in one or more issuers or in fewer issuers than diversified funds. Thus, the Fund may be more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments.

New Fund Risk. A new fund's performance may not represent how the fund is expected to or may perform in the long term. In addition, new funds have limited operating histories for investors to evaluate and new funds may not attract sufficient assets to achieve investment and trading efficiencies.
